

PROFESSIONAL SUMMARY

Java Backend Developer / SDE-II with 3+ years of experience building enterprise backend systems using Java, Spring Boot, MongoDB, SQL Server, MySQL, Redis, and REST APIs. Experienced in high-volume data synchronization, scheduler-driven batch processing, MongoDB performance optimization, API integrations, approval workflows, and production debugging. Optimized a large-scale SQL Server–MongoDB synchronization pipeline from 2+ hours to 2.8 minutes using compound indexing, JDBC streaming, and bulk operations. Strong foundation in Microservices, Apache Kafka, Multithreading, JVM Internals, System Design, and CI/CD.

EDUCATION

Masai School	Remote, India
Full Stack Web Development Program (Backend-Focused)	Jan 2023 – June 2023
Java, JavaScript, Spring Boot, REST APIs, MongoDB, MySQL	
Madhu Vachaspati Institute Of Engineering and Technology	Kaushambi, India
Bachelor of Technology – Electronics and Communication Engineering; CGPA: 7.97	July 2018 – June 2022

TECHNICAL SKILLS

- Programming Languages: Java (8/11), JavaScript, SQL
- Backend Frameworks: Spring Boot, Spring MVC, Spring Data JPA, Spring Data MongoDB, Hibernate
- Databases & Messaging: MongoDB (Compound Indexing, Bulk Writes), MySQL, Microsoft SQL Server, Redis, Apache Kafka
- API Development & Security: REST APIs, API Integration, Server-side Pagination, JWT Authentication, RBAC
- Batch & Schedulers: Spring Scheduler, Cron Jobs, JDBC Streaming, Bulk Operations, Background Processing
- DevOps & Tools: Docker, Jenkins, CI/CD, Git, Jira, Maven, Gradle, Postman, AWS S3
- Architecture & Methodology: Microservices, Monolithic Architecture, System Design, Agile, Scrum
- Agentic & AI-Assisted Development: Antigravity (agentic: code review, debugging, API development); ChatGPT, Claude, Gemini, Codex (coding & design discussions)

CORE BACKEND COMPETENCIES

- Object-Oriented Programming (OOP), Data Structures & Algorithms, JVM Internals, Multithreading & Concurrency, REST API Design, Design Patterns, SOLID Principles, Query Optimization, Pagination Strategies, JWT Authentication, RBAC, Distributed Systems Basics

EXPERIENCE

InsightGeeks Solutions Pvt. Ltd.	Noida, India
SDE II – Java Backend Developer	Aug 2023 – Present
High-Scale Data Synchronization: Engineered SQL Server to MongoDB synchronization pipelines using Java 11, Spring Boot, and JDBC, processing 500K–1M records for an enterprise financial client.	
Database Performance Optimization: Reduced data synchronization runtime from 2+ hours to 2.8 minutes (97% faster) by designing MongoDB compound indexes, JDBC streaming, and unordered bulk writes, updating 242,158 records in under 3 minutes.	
Scheduler & Batch Processing: Orchestrated dependent monthly master-sync and daily delta-sync jobs covering new-user historical catch-up, closed-loan deactivation, DPD/OD updates, and next-day collection task generation.	
Reliability & Memory Management: Eliminated missed records at day-boundary edge cases using a rolling 24-hour lookback window, and stabilized JVM heap usage through streaming queries and batch-level cleanup.	
Reporting Systems: Developed 10+ database-driven operational and analytical reports for 3+ business teams, improving reporting accuracy by 40%.	
API Integrations: Integrated push-based and pull-based REST APIs across 6+ internal modules, supporting real-time and scheduled data synchronization.	
Delivery & Code Quality: Performed code reviews across multiple backend modules and resolved production defects, improving system stability by 20%.	

PROJECTS

TrackoField Enterprise Product	
Field Force Management System	Aug 2023 – Present
Center Management: Implemented a hierarchical Center-Group-Member module using Spring Data JPA and REST APIs, enabling borrower onboarding, group loan collection, and referential data integrity.	
Midland Microfin Integration: Delivered client-specific data synchronization and task-generation workflows for Centers, Members, and loan DPD data using SQL Server, MongoDB, and scheduler-driven processing.	
Attendance & Overtime Processing: Engineered scheduler-based attendance and overtime processing using daily cron jobs, reducing manual attendance corrections by 40%.	
Expense Processing Engine: Developed role-based expense claim workflows across 4+ categories with multi-level approvals, reducing reconciliation effort by 35%.	
Leave Processing System: Built leave request and approval processing supporting multi-level approvals across 3+ organizational roles.	
Operational Reporting: Produced reports for Attendance, Activity, Distance, Expense, Leave, and Task metrics, improving operational visibility by 40%.	
Approval Workflow Framework: Established reusable multi-level approval workflows spanning attendance, leave, expense, and task modules.
